

Press Release

In operation Piotrków wind farm in Poland, for a total of 24.5 MW

Genoa, 7 July 2022 – ERG has announced the commissioning of Piotrków wind farm in the northern area of Poland, for a total of 24.5 MW.

The wind farm, internally developed and built by ERG, is composed by seven 3,5 MW Nordex N117 turbines. Annual output when fully operational is estimated at about 76 GWh, corresponding to 3,100 equivalent hours and around 65 kt of avoided CO2 emission. The wind farm was awarded an inflation-indexed tariff for a period of 15 years, starting from the date of entry into operation.

Paolo Merli, CEO ERG, has commented: "With the commissioning of the Piotrków wind farm, we further consolidate our presence in Poland where we reach 106 MW of installed wind capacity, with an additional 36 MW that will be added by the end of the year, due to the advanced construction stage in Laszki. A further important step towards our organic growth and geographic diversification strategy, in line with the 2022-2026 Business Plan".
