ERG expands in France: Picardie I wind farm (18 MW) enters operation

Genoa, 8 May 2025 - ERG has completed the construction and begun the energisation of a new wind farm in the Pas-de-Calais region of France, which the group developed and built in-house.

The plant, comprising five Vestas V112 turbines rated at 3.6 MW each, has a total installed capacity of 18 MW and is expected to generate 48 GWh per year – equivalent to the annual consumption of approximately 15,000 households. The new fleet benefits from a 20-year contract for difference (CfD).

Paolo Merli, Chief Executive Officer of ERG, commented: *‘With the launch of the high-quality Picardie I wind farm, with a producibility of over 2,600 equivalent hours and revenue security through a twenty-year tariff, we are consolidating our presence in France, the Group’s second core market, where we have reached 733 MW of installed wind and solar capacity.’*
